Bioenergy Production by Anaerobic Digestion Nicholas Korres 2013-08-29 Interest in anaerobic digestion (AD), the process of energy production through the production of biogas, has increased rapidly in recent years. Agricultural and other organic waste are important substrates that can be treated by AD. This book is one of the first to provide a broad introduction to anaerobic digestion and its potential to turn agricultural crops or crop residues, animal and other organic waste, into biomethane. The substrates used can include any non-woody materials, including grass and maize silage, seaweeds, municipal and industrial wastes. These are all systematically reviewed in terms of their suitability from a biological, technical and economic perspective. In the past the technical competence and high capital investment required for industrial-scale anaerobic digesters has limited their uptake, but the authors show that recent advances have made smaller-scale systems more viable through a greater understanding of optimising bacterial metabolism and productivity. Broader issues such as life cycle assessment and energy policies to promote AD are also discussed.

Making Choices about Hydrogen Lynn Krieger Mytelka 2008 Since the mid-1990s, the emergence of hydrogen economy and the speed with which it will arrive have been vigorously debated. As a disruptive technology, dominant designs for the production, storage and distribution of hydrogen have not yet been established. Not have performance characteristics been achieved to compete with the existing combustion engine, though the efficiency and durability of hydrogen fuel cells are improving. This publication highlights the uncertainties involved in making choices about hydrogen and fuel cells in planning the development policies on national energy, environment and transport sector.

Shi'ite Lebanon Roschanack Shaery-Eisenlohr 2008 By recasting the relationship between religion and nationalism in the Middle East, Roschanack Shaery-Eisenlohr proposes a new framework for understanding Shi'ite politics in Lebanon. Her study draws on a variety of untapped sources, reconsidering not only the politics of the established leadership of Shi'ites but also institutional and popular activities of identity production. Shaery-

Eisenlohr traces current Shi'ite politics of piety and authenticity to the coexistence formula in Lebanon and argues that engaging in the discourses of piety and coexistence is a precondition to cultural citizenship in Lebanon. As she demonstrates, debates over the nature of Christianity and Islam and Christian-Muslim dialogue are in fact intertwined with power struggles at the state level. Since the 1970s, debates in the transnational Shi'ite world have gradually linked Shi'ite piety with the support of the Palestinian cause. Iran's religious elite has backed this piety project in multiple ways, but in doing so it has assisted in the creation of a variety of Lebanese Shi'ite nationalisms with competing claims to religious and national authenticity. Shaery-Eisenlohr argues that these ties to Iran have in fact strengthened the position of Lebanese Shi'ites by providing, as is recognized, economic, military, and ideological support for Hizbullah, as well as by compelling Lebanese Shi'ites to foreground the Lebanese components of their identity more forcefully than ever before. Shaery-Eisenlohr challenges the belief that Shi'ite identity politics only serve to undermine the Lebanese national project. She also makes clear that the expression of Lebanese Shi'ite identity is a nationalist expression and an unintended result of Iranian efforts to influence the politics of Lebanon.
