Drosophila Neurobiology Bing Zhang 2010 Based on Cold Spring Harbor Laboratory's long-running course, Drosophila Neurobiology: A Laboratory Manual offers detailed protocols and background material for researchers interested in using Drosophila as an experimental model for investigating the nervous system. This manual covers three approaches to the field: analysis of neural development, recording and imaging activities in the nervous system, and analysis of behavior. Techniques described include molecular, genetic, electrophysiological, imaging, behavioral and developmental methods.

Gastrointestinal Interventional Endoscopy Mihir S. Wagh 2019-11-16 This volume provides a concise yet comprehensive overview of advanced techniques in interventional endoscopy beyond ERCP and EUS. Comprised of sections on endoscopic resection (including EMR, ESD, STER and EFTR), bariatric endoscopy, endoscopic myotomy (POEM, GPOEM, ZPOEM and PREM), endoscopic anti-reflux therapies, endoscopic tissue apposition, and advances in interventional EUS, the text highlights indications and technical details, assesses safety and efficacy, and provides quality metrics and training pathways for these endoscopic procedures. The book is also accompanied by multiple photos and videos illustrating these endoscopic techniques. Written by world renowned experts in the field, Gastrointestinal Interventional Endoscopy: Advanced Techniques is a valuable resource for gastroenterologists and surgeons interested in the latest advances in interventional endoscopy.

Handbook of Print Media Helmut Kipphan 2014-02-27 Printers nowadays are having to learn new technologies if they are to remain competitive. This innovative, practical manual is specifically designed to cater to these training demands. Written by an expert in the field, the Handbook is unique in covering the entire spectrum of modern print media production. Despite its comprehensive treatment, it remains an easy-to-use, single-volume reference, with all the information clearly structured and readily retrievable. The author covers both traditional as well as computer-aided technologies in all stages of production, as well as electronic media and multimedia. He also deals with training, research, strategies and trends, showing readers how to implement the latest methods. With 1,200 pages, containing 1,500 illustrations - over half in colour - the Handbook conveys the current state of technology together with its specific terminology. The accompanying CD-ROM includes the entire manual in fully searchable form, plus additional software tools. Invaluable information for both beginners and "old hands" in printing works, publishing houses, trade associations, the graphics industry, and their suppliers.

Under the Shadow of Nationalism Mariko Asano Tamanoi 1998-03-01 The contribution of rural women to the creation and expansion of the Japanese nation-state is undeniable. As early as the nineteenth century, the women of central Japan's Nagano prefecture in particular provided abundant and cheap labor for a number of industries, most notably the silk spinning industry. Rural women from Nagano could also be found working, from a very young age, as nursemaids, domestic servants, and farm laborers. In whatever capacity they worked, these women became the objects of scrutiny and reform in a variety of nationalist discourses--not only because of the importance of their labor to the nation, but also because of their gender and domicile (the countryside was the centerpiece of state ideology and practice before and during the war, during the Occupation, and beyond). Under the Shadow of Nationalism explores the interconnectedness of nationalism and gender in the context of modern Japan. It combines the author's long-term field research with a painstaking examination of the documents behind these discourses produced at various levels of society, from the national (government records, social reformers' reports, ethnographic data) to the local (teachers' manuals, labor activists' accounts, village newspapers). It provides a wide-ranging yet in-depth look at a key group of Japanese women as national subjects through the critical chapters of Japanese modernity and postmodernity.

MEDINFO 92 K. C. Lun 1992 The field of medical informatics has steadily matured and MEDINFO 92 shows an upturn in the uses of informatics in the health sector. This volume contains significant contributions on diverse issues, a popular field being knowledge-based work: concepts, methodologies, software and other tools, systems and evaluations of systems and experiences. Several papers describe functional integration between differing systems, institutions and even geographic areas; they confirm a trend towards having knowledge-based systems contained in, or integrated with, overall management information systems serving the physician as well as the rest of the health support team. As well as contributions on those topics that have been covered in MEDINFO congresses since their inception in 1974, such as bibliographic systems, nursing informatics and hospital information systems, other issues addressed include data standards such as semantics, syntax and communication standards; the quality, accuracy and ethical values of medical data; and developments in networking.

Innovation in Pricing Andreas Hinterhuber 2013-05-07 Pricing has a substantial and immediate impact on profitability. Most companies, however, still use costs or competition as a main basis for setting prices. Product or business model innovation has a high priority for many companies whereas innovation in pricing has received scant attention. This book examines how innovation in pricing can drive profits. The text examines innovation in pricing from four complementary perspectives. Innovation in Pricing Strategy illustrates how companies implement innovative pricing strategies, such as customer value-based pricing. Innovation in Pricing Tactics deals with innovative tools to measure and

increase customer willingness to pay and to communicate value to B2B and B2C customers. Innovation in Organizing the Pricing Function looks at state-of-the art approaches to embed the pricing function in the organization. Psychological Aspects of Pricing illustrates how companies can influence customer perceptions of value and price in their question to implement innovation in pricing. This edited volume brings together 26 articles from academics, business practitioners and consultants. Authors are from the world's largest companies, leading research-based universities and consulting companies specialized in pricing. This book is the only book dedicated to innovation in pricing and an essential read for business executives and pricing managers wishing to treat innovation in pricing as seriously as they treat product or business model innovation.

Cosmic Rays at Earth P.K.F. Grieder 2001-07-27 In 1912 Victor Franz Hess made the revolutionary discovery that ionizing radiation is incident upon the Earth from outer space. He showed with ground-based and balloon-borne detectors that the intensity of the radiation did not change significantly between day and night. Consequently, the sun could not be regarded as the sources of this radiation and the question of its origin remained unanswered. Today, almost one hundred years later the question of the origin of the cosmic radiation still remains a mystery. Hess' discovery has given an enormous impetus to large areas of science, in particular to physics, and has played a major role in the formation of our current understanding of universal evolution. For example, the development of new fields of research such as elementary particle physics, modern astrophysics and cosmology are direct consequences of this discovery. Over the years the field of cosmic ray research has evolved in various directions: Firstly, the field of particle physics that was initiated by the discovery of many so-called elementary particles in the cosmic radiation. There is a strong trend from the accelerator physics community to reenter the field of cosmic ray physics, now under the name of astroparticle physics. Secondly, an important branch of cosmic ray physics that has rapidly evolved in conjunction with space exploration concerns the low energy portion of the cosmic ray spectrum. Thirdly, the branch of research that is concerned with the origin, acceleration and propagation of the cosmic radiation represents a great challenge for astrophysics, astronomy and cosmology. Presently very popular fields of research have rapidly evolved, such as high-energy gamma ray and neutrino astronomy. In addition, high-energy neutrino astronomy may soon initiate as a likely spin-off neutrino tomography of the Earth and thus open a unique new branch of geophysical research of the interior of the Earth. Finally, of considerable interest are the biological and medical aspects of the cosmic radiation because of its ionizing character and the inevitable irradiation to which we are exposed. This book is a reference manual for researchers and students of cosmic ray physics and associated fields and phenomena. It is not intended to be a tutorial. However, the book contains an adequate amount of background materials that its content should be useful to a broad community of scientists and professionals. The present book contains chiefly a data collection in compact form that covers the cosmic radiation in the vicinity of the Earth, in the Earth's atmosphere, at sea level and underground. Included are predominantly experimental but also theoretical data. In addition the book contains related data, definitions and important relations. The aim of this book is to offer the reader in a single volume a readily available comprehensive set of data that will save him the need of frequent time consuming literature searches.

Flood and Coastal Erosion Risk Management Edmund Penning-Rowsell 2014-01-03 A new 'Multi-Coloured Manual' This book is a successor to and replacement for the highly respected manual and handbook on the benefits of flood and coastal risk management, produced by the Flood Hazard Research Centre at Middlesex University, UK, with support from Defra and the Environment Agency. It builds upon a previous book known as the "multi-coloured manual" (2005), which itself was a synthesis of the blue (1977), red (1987) and yellow manuals (1992). As such it expands and updates this work, to provide a manual of assessment techniques of flood risk management benefits, indirect benefits, and coastal erosion risk management benefits. It has three key aims. First it provides methods and data which can be used for the practical assessment of schemes and policies. Secondly it describes new research to update the data and improve techniques. Thirdly it explains the limitations and complications of Benefit-Cost Analysis, to guide decision-making on investment in river and coastal risk management schemes.

Handbook of Neuropsychology and Aging Paul David Nussbaum 2013-11-11 Leaders in neuropsychology, behavioral neurology, speech and language science, neuropsychiatry, and many other disciplines contribute to this volume, the first comprehensive review of knowledge in the field. They discuss a wide range of disorders, including areas of recent research - such as frontal lobe dementias and the neuropsychological aspects of late life depression - and clinical problems typically given insufficient consideration in other works, such as seizure disorder, head injury, and mental retardation. Normal aging is also covered in detail, and assessment procedures and clinical interventions are given thorough treatment. Other highlights include discussions of guardianship and caregiving personality and behavior, psychotic disorders, Alzheimer's, and head trauma.

Canmaking Terry A. Turner 2013-04-17 Metal protectin, including both metal treatments and coating systems. affords mutual protection for both can and contents. this book is the first reference to meld the knowledge of chemical companies and canmaking companies, covering materials and processes used in both protective and decorative aspects of metal packaging. Topics include basic substrates (aluminum and steel), demands of the markets served, basic metal-forming processes, and the specific decorative and protctive needs of different packaging types, with emphasis give to the technologies most likely to be used, such as ultraviolet curing. This practical reference gives readers a background and familiarity with terminology and technology and gives insight into why certain technologies are used over others.
